

Material Declaration Testing Strategy "Product Audit"

What are your answers to these Eco-Compliance Questions?

Are you Eco-Compliant?

Understanding "green" regulations and how they affect internal and external supply chain processes has become critical to the manufacturing and marketing strategies of electronics companies. The compliance of any product at any point in time is a significant challenge in answering regulatory and customer audits.

Is the compliance data from your supplier accurate?

OEMs, ODMs, CMs, and component manufacturers must rely on compliance data from their supply chain. Your reputation is on the line with regard to compliance to the global consumer product regulations you must adhere to. Companies need to be able to verify that the information from their supply chain, as well as your manufacturing processes are compliant and the "Product Audit" Compliance Strategy will provide that information and verification.

Is your compliance data up to date?

Your ability to sell material in various "World Markets" is based on the compliance information from your supply chain. OEM Green Programs, as well as Auditors, want current up to date compliance data. The "Product Audit" Compliance Strategy will provide time stamped compliance data on your material or on specific aspects of your material.

What is your confident level with:

- Your Eco-Compliance program?
- Your supplier's compliance verification information?
- Your manufacturing processes?
- Your CM adherence to your green mfg protocols?

The "Product Audit" Compliance Strategy will help to provide accurate, up to date Eco-Compliance information that will answer each of these questions and help strengthen your Due Diligence.
